SUMMARY

AI & ML engineering student with hands-on experience in data science, generative AI, and multi-agent systems. Built and deployed end-to-end ML pipelines, RAG-based chatbots, and real-time analytics dashboards using Python, Scikit-learn, IBM WatsonX, AWS, and Streamlit. AWS Certified AI Practitioner. Actively seeking roles in Data Science or AI Development where technical depth meets real-world problem solving.

EDUCATION

G. Pulla Reddy Engineering College <i>B.Tech in Computer Science & Engineering (AI & ML)</i> Brindavan Institute of Technology and Science <i>Diploma in Computer Engineering</i>	Kurnool, India CGPA: 8.47 Aug 2024 – Jun 2027 Kurnool, India Percentage: 95.78% Sep 2021 – May 2024
--	--

EXPERIENCE

Remote Research Intern – Data Science & Health Informatics <i>University of North Texas (UNT), USA GPREC-UNT MoU Collaborative Program</i> – Selected for a competitive remote research internship under the GPREC-UNT MoU (signed Feb 2025), supervised by Dr. Pretom Roy Ovi, Assistant Professor of Data Science at UNT. – Assigned to Guardian Twin – a privacy-preserving, AI-powered digital twin system for home patient monitoring and caregiver decision support using consumer-grade wearable devices (Samsung Galaxy Watch 5/6, iHealth FLOW AM6). – Scope covers wearable data pipeline design, real-time anomaly detection, fall detection (accelerometer + ML hybrid), 5-level event classification, and caregiver alert interfaces targeting sub-10-second end-to-end latency.	May 2026 – Present <i>Remote</i>
Data Analytics Intern <i>iTUX Solutions</i> – Built data analysis and visualization dashboards using Microsoft Power BI to deliver actionable business insights. – Authored training notes, presentations, and technical documentation to simplify complex analytical concepts. – Structured and contributed content for the company website, improving clarity and information hierarchy. – Collaborated cross-functionally with teams to translate data findings into strategic recommendations.	Dec 2023 – May 2024 <i>Remote</i>

SKILLS

Programming – Python, Java
Data Science & ML – Pandas, NumPy, Scikit-learn, Matplotlib, XGBoost, OpenCV, Computer Vision, Regression, Classification
Generative AI & Cloud – Prompt Engineering, Gemini API, IBM WatsonX, RAG, Multi-Agent Systems, Groq API, AWS (SageMaker, Bedrock, PartyRock), Generative AI, Foundation Models, AI Governance
Frameworks & APIs – FastAPI, Streamlit, Next.js, Supabase
Databases – MySQL, SQLite
Tools – Power BI, Jupyter Notebook, VS Code, GitHub, Cloud Computing
Soft Skills – Team Leadership, Cross-functional Collaboration, Time Management, Problem-solving, Technical Documentation

PROJECTS

Bharat Vaani – Culturally Adaptive Indian News Engine [GitHub] – Led “The DataMind Squad” to build a culturally adaptive Indian news engine for the ET Gen AI Hackathon 2026 (Problem Statement 8). – Built a full-stack application using FastAPI + Next.js 14 + Groq API (llama-3.1-8b-instant) + edge-tts + SQLite, featuring a Desi Analogy Engine and 4 output formats. – Implemented side-by-side format comparison, feedback-driven persona learning, and real-time audio narration.	Mar 2026
WASP – Win Probability Model for IPL [GitHub] – Developed an end-to-end win probability model trained on 130k+ IPL ball-by-ball records. – Engineered match-context features and trained Logistic Regression and XGBoost classification models. – Visualized real-time win probability curves and identified momentum flip moments across innings. – Deployed a Streamlit application enabling real-time match prediction and interactive visualization.	Nov 2025
MedIQ – Medical Image Quality & Metadata Intelligence System [GitHub]	Feb 2026

- Engineered an automated Quality Control (QC) pipeline for medical imaging using Computer Vision techniques (Laplacian Variance, SNR analysis).
- Analyzed NIH Chest X-ray dataset to correlate image artifacts (blur, noise) with patient metadata for systemic error detection.
- Deployed a real-time Streamlit dashboard providing instant Accept/Reject diagnostics and disease-pattern visualization.

that32bloke – Sports Analytics Blog Platform [Live] 2025 – 2026

- Built a full-featured sports analytics blog platform with CMS, user authentication, and newsletter subscription.
- Designed and deployed end-to-end with a focus on cricket analytics and data-driven sports storytelling.

Ryze Pocket Cashier – Point of Sale System Jan 2026

- Built a fully functional multi-shop POS system in a single day using Lovable and Supabase with dark mode UI.
- Features real-time inventory management, billing, and multi-shop switching designed for small business use.

Play11 Prism – Cricket Performance Analysis Platform [GitHub] | [Live] May 2025

- Developed an AI-powered platform to optimize T20 playing XI selection based on player performance metrics.
- Implemented manual player data entry with automated best XI generation logic.
- Converted a Jupyter Notebook prototype into a production-ready user-facing web application.

Applied Data Science Lab Projects – WorldQuant University 2025 – 2026

- Regression & Forecasting: Built models for housing price prediction (Mexico, Buenos Aires), PM2.5 air quality forecasting (Nairobi), and asset volatility modeling using GARCH (India).
- Classification & Imbalanced Learning: Classified earthquake building damage (Nepal) and predicted corporate bankruptcy (Poland) using ensemble and resampling techniques.
- Clustering & Experimentation: Segmented US households via K-Means and PCA; designed A/B tests evaluated with chi-square statistical tests.

HACKATHONS

ET Gen AI Hackathon 2026 – Economic Times Mar 2026

- Led “The DataMind Squad” as Team Lead for Problem Statement 8, building Bharat Vaani – a culturally adaptive Indian news engine powered by Groq API, FastAPI, and Next.js 14.
- Delivered a PPTX pitch deck, architecture document, and live demo within the hackathon timeline.

IBM Dev Day – AI Demystified Hackathon Feb 2026

- Served as Team Lead and AI Architect to design and deploy a fully functional Multi-Agent Patent Strategy System using IBM WatsonX Orchestrate.
- Engineered reasoning logic for 5 interacting agents, coordinating tasks across patent retrieval, analysis, and strategic recommendation.
- Collaborated with a globally distributed team, managing architecture decisions and cross-timezone coordination throughout the hackathon.

AIIgnite 2.0 – Inter-College AI Hackathon Jan 2026

- Built **MetroBot**, an AI-powered metro query chatbot using Gemini API and Retrieval-Augmented Generation (RAG) to handle real-time passenger queries.
- Designed document retrieval pipelines grounded on metro data to deliver accurate, context-aware conversational responses.

CERTIFICATIONS

AWS AI Practitioner Challenge – Udacity × AWS May 2026

Part of AWS AI & ML Scholars Program | [View Credential](#)

Machine Learning Foundation Certification – Infosys Springboard Jan 2026

Applied Data Science Lab – WorldQuant University Jan 2026

[View Credly Badge](#)

Meta Data Analyst Professional Certificate – Coursera Feb 2025

[View Certificate](#)

Google AI Essentials – Coursera Aug 2024

[View Certificate](#)

Python Programming – HCL GUVI

ACHIEVEMENTS & EXTRACURRICULAR

- Solved 350+ coding problems across competitive programming platforms.
- Recognized as a meritorious student throughout Diploma with 95.78% aggregate.
- Vibe-coded and independently deployed 4+ responsive websites using HTML, CSS, and JavaScript with high-fidelity animations; hosted on GitHub Pages.
- Duolingo English Test – Score: 114 (Feb 2026). Proficient in English, Urdu (native), Telugu, and Hindi.
- Cricket and Football enthusiast with strong interest in sports analytics; read *Hitting Against the Spin* by Ben Jones & Nathan Leamon.
- AI Art Creator – Admin of ARB AI Arts (@arb.ai.arts, Instagram).
